

Calf Milk Replacer

ProviMilk Daisy

Strong performance in dairy and beef calves

INTRODUCING PROVIMILK DAISY

- Whey based
- Enhances early growth rates
- Aids rumen development

PROVIMILK – THE FEATURES

- Contains NuStart™ 50 – a natural gut conditioning package to improve performance and health
- Excellent mixability and flowability characteristics
- Highly palatable and distinctive flavouring
- Carefully selected ingredients providing easily digested energy and protein for young calves
- Contains an advanced trace element and vitamin package tailored to the requirements of rapidly developing calves
- Contains Provox™ 50 – a natural antioxidant that supports the immune system and acts as a partial Vitamin E replacer

DECLARATION

Fat	18 %	Vitamin A	25 000 IU/kg
Protein	22 %	Vitamin D3	6 000 IU/kg
Fibre	0.30 %	Vitamin E	150 IU/kg
Ash	8.20 %	Provox™ 50	100 IU/kg (vit. E eq.)

MIXING AND FEEDING

- Mix 125 g or 150 g of powder with 875 ml or 850 ml of water to make 1 litre of mixed milk
- Add two thirds of the volume of hot water (55°C) into a clean bucket
- Weigh the powder and add it to the bucket of hot clean water
- Mix thoroughly with a whisk until smooth and in suspension
- Add remaining one third of cool clean water to make up to the required total litres and mix thoroughly
- Check the temperature of the mixed milk using a thermometer and feed required amount to the calf immediately

WEANING

Weaning after sufficient consumption of calf starter (1.5 kg for three consecutive days) can be encouraged by reducing the volume of milk fed or the number of feeds per day.

Please contact your Cargill Animal Nutrition representative for specialist advice on selecting suitable mixing and feeding regimes tailored to your overall calf performance objectives.
